**In Detail**

If you've used the Corona Software Development Kit to build your very first new mobile app, you already know how easy it makes developing across all the pieces of this fragmented market. This book upgrades your knowledge of Lua and the Corona API with designs, habits and advanced concepts to speed your development and create more exciting apps.

Corona SDK Hotshot will show you how to combine advanced Lua features such as coroutines and metatables with Corona's sophisticated tools, including physics and networking, to develop exactly the game or app you or your customers need, quickly and with an eye towards updating your app with improvements in the future.

Corona SDK Hotshot will expand your basic knowledge of Corona with an insight into making the most of its event platform, using physics wisely and easily, and moving on to advanced programming tasks like path-finding.

You will focus heavily on how to keep your programs understandable as they become more complicated, by using modules and events to divide it up. You'll practice ways to make AI scripts and map files easily understandable to designers and other collaborators, and use networks like GameCenter to publish progress.

The last projects will combine the full range of covered material to illustrate how you can produce sophisticated and exciting apps as a Corona Hotshot!

**Approach**

Using a project based approach you will learn the coolest aspects of Corona SDK development. Each project contains step- by-step explanations, diagrams, screenshots, and downloadable materials.

**Who this book is for**

This book is for users who already have completed at least one simple app using Corona, or are familiar with mobile development using another platform and have done Lua programming in another context.
