## **Phytochemical Dictionary of the Leguminosae** Frank Bisby

The Phytochemical Dictionary of the Leguminosae is the first of a new type of reference source giving phytochemical records for all legumes (plants in the Pea family - Leguminosae or Fabaceae). The precise chemical substances found, the organs in which they occur (eg the leaf or the seed) and the bibliographic citation are given for each plant species recorded. These are accompanied by extensive supporting botanical, chemical, geographical and bibliographic information for each plant and substance. Over 4,000 chemical substances occurring in 2,000 plant species are contained within 20,000 entries. The Leguminosae is one of the world's most economically important groups of plants, including peas, beans, soya and chickpeas, and provides the world's major source of nitrogen fixed from the atmosphere. As this book contains detailed, comprehensive and up-to-date phytochemical data on this family, available for the first time in a single source, it will prove invaluable to all those working in the food, pharmaceutical and agrochemical industries, as well as in botanical, natural product and taxonomic research.
