Michel Chein, Marie-Laure Mugnier

Graph-based Knowledge Representation: Computational Foundations of Conceptual Graphs (Advanced Information and Knowledge Processing) Michel Chein, Marie-Laure Mugnier

This book provides a definition and study of a knowledge representation and reasoning formalism stemming from conceptual graphs, while focusing on the computational properties of this formalism. Knowledge can be symbolically represented in many ways. The knowledge representation and reasoning formalism presented here is a graph formalism – knowledge is represented by labeled graphs, in the graph theory sense, and reasoning mechanisms are based on graph operations, with graph homomorphism at the core. This formalism can thus be considered as related to semantic networks. Since their conception, semantic networks have faded out several times, but have always returned to the limelight. They faded mainly due to a lack of formal semantics and the limited reasoning tools proposed. They have, however, always rebounded – cause labeled graphs, schemas and drawings provide an intuitive and easily understandable support to represent knowledge. This formalism has the visual qualities of any graphic model, and it is logically founded. This is a key feature because logics has been the foundation for knowledge representation and reasoning for millennia. The authors also focus substantially on computational facets of the presented formalism as they are interested in knowledge representation and reasoning formalisms upon which knowledge-based systems can be built to solve real problems. Since object structures are graphs, naturally graph homomorphism is the key underlying notion and, from a computational viewpoint, this moors calculus to combinatorics and to computer science domains in which the algorithmic qualities of graphs have long been studied, as in databases and constraint networks.

From reader reviews:

Diana Saffold:

Now a day individuals who Living in the era exactly where everything reachable by talk with the internet and the resources inside it can be true or not demand people to be aware of each information they get. How individuals to be smart in receiving any information nowadays? Of course the answer is reading a book. Reading a book can help persons out of this uncertainty Information especially this Graph-based Knowledge Representation: Computational Foundations of Conceptual Graphs (Advanced Information and Knowledge Processing) book because book offers you rich facts and knowledge. Of course the details in this book hundred % guarantees there is no doubt in it you probably know this.

Richard Hennessy:

Graph-based Knowledge Representation: Computational Foundations of Conceptual Graphs (Advanced Information and Knowledge Processing) can be one of your nice books that are good idea. We all recommend that straight away because this reserve has good vocabulary that will increase your knowledge in vocabulary, easy to understand, bit entertaining but still delivering the information. The writer giving his/her effort to place every word into enjoyment arrangement in writing Graph-based Knowledge Representation: Computational Foundations of Conceptual Graphs (Advanced Information and Knowledge Processing) but doesn't forget the main level, giving the reader the hottest along with based confirm resource details that maybe you can be certainly one of it. This great information can easily drawn you into completely new stage of crucial pondering.

Wendy Kroll:

That e-book can make you to feel relax. That book Graph-based Knowledge Representation: Computational Foundations of Conceptual Graphs (Advanced Information and Knowledge Processing) was bright colored and of course has pictures on the website. As we know that book Graph-based Knowledge Representation: Computational Foundations of Conceptual Graphs (Advanced Information and Knowledge Processing) has many kinds or style. Start from kids until young adults. For example Naruto or Investigation company Conan you can read and think you are the character on there. So , not at all of book are generally make you bored, any it can make you feel happy, fun and unwind. Try to choose the best book for you and try to like reading that will.

Jessie Adams:

Publication is one of source of expertise. We can add our knowledge from it. Not only for students but additionally native or citizen will need book to know the up-date information of year for you to year. As we know those books have many advantages. Beside all of us add our knowledge, also can bring us to around the world. By book Graph-based Knowledge Representation: Computational Foundations of Conceptual

Graphs (Advanced Information and Knowledge Processing) we can acquire more advantage. Don't someone to be creative people? For being creative person must prefer to read a book. Only choose the best book that ideal with your aim. Don't end up being doubt to change your life at this time book Graph-based Knowledge Representation: Computational Foundations of Conceptual Graphs (Advanced Information and Knowledge Processing). You can more attractive than now.
